Clarence Valley Sustainability Framework

Our vision of a sustainable valley is achieved by protecting the values and assets of 5 key elements of sustainability: ecology, economy, society and culture, human habitat and governance

Council leads by example, working together in practical partnerships with community, schools, government, business and industry for a sustainable future

Our short term decisions focus on long terms goals, and we report regularly on our challenges and progress, seeking to continuously improve

Our broad range of lifestyles and diverse communities create prosperity and well-being by protecting our environment, and through healthy economic and social activities
